

Problem-Solution fit canvas 2.0

Purpose / Vision: To visualize electricity consumption patterns and empower smarter, data-driven energy decisions for a sustainable future.

Define CS, fit into	1. CUSTOMER SEGMENT(S) CS - Real estate analysts - Real estate firms and pricing strategists - Property consultants and - Business intelligence teams in	6. CUSTOMER CC - Limited technical/data visualization skills - Budget constraints for tool adoption - Reliance on manual Excel-based workflows - Limited access to cleaned, centralized data - Low IT infrastructure in smaller utility companies	5. AVAILABLE SOLUTIONS AS - Static government reports in PDF/Excel - Manual data analysis using spreadsheets - Internal dashboards with limited scope Pros: Familiar tools, simple setup Cons: No interactivity, slow, difficult to analyze, lacks filtering	Explore AS,
Focus on J&P, tap into BE, understand	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Identify factors influencing housing sale prices - Analyze renovation trends and house age patterns - Understand market dynamics based on house features (e.g., bathrooms, floors) - Forecast future price trends using historical patterns - Make data-driven decisions for pricing and inventory strategy	9. PROBLEM ROOT CAUSE RC - Stakeholders lack tools to identify impactful featuresin - Datasets are raw, unfiltered, and not visualized - Decision-makers lack tools and training to interpret the data easily - Growing complexity in managing supply-demand post-COVID and climate events	7. BEHAVIOUR BE - Use Excel to sort and manually analyze usage - Request reports from IT/data team - Refer to government portals for downloads - Discuss patterns informally within departments - Use experience-based intuition over data evidence	Focus on J&P, tap into BE, understand
Identify strong TR & EM	3. TRIGGERS TR - Pressure to optimize pricing strategies in a competitive housing market - Need to differentiate between renovated and non-renovated properties	10. YOUR SOLUTION SL A web-based dashboard using Tableau embedded into a Flask app. Pre-processed data stored in MySQL, integrated with real-time filtering. Visualizations include: Time-wise, region-wise, lockdown comparison, and top/bottom usage states. Interactive filters for users to select year, region, and time period. Optional ML-powered demand forecasting. Published on Tableau Public for easy access and sharing.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE Download datasets from energy portals (POSOCO, Ministry of Power) Read insights or trends from news portals or LinkedIn Watch dashboard demos (YouTube, Tableau) 8.2 OFFLINE Attend government briefings Internal review meetings and printed reports Collaborate on planning documents manually	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM Before: Overwhelmed, frustrated, unsure, data-blind After: Informed, empowered, confident, able to make smart decisions
